

## **HOW TO PROPERLY SELECT AN INFRARED INSPECTION SERVICE!**

- **Avoid Conflict of Interest**  
Select a company that is strictly an inspection service. If a company does electrical repair along with the inspection, it can be a conflict of interest. Allis Engineering is a professional, independent third party. Our goal is to perform an inspection in the most productive and efficient manner to identify potential problems before they become more critical.
- **Avoid Self Service**  
Inspections sometimes are done in house. The outside inspection is a strong reality check by management as to the practices of staff and allows them to take independent steps to remedy. It keeps everyone on their toes. Insurance companies may not recognize an in house program. They are obviously not independent and may not be as qualified as a full-time service with 20 years of experience. Some facilities have sought to contain their cost and dependency on outside services only to find their expensive acquisition of an infrared camera shelved after one year. Let specialists be specialists.
- **Experience**  
The Company you select should have years of experience. As is recommended for hiring any contractor, ask for references. Allis Engineering has been providing services to engineering departments for 20 years. Our experience includes: Hospitals, Hotels, Airports, Shopping Centers, Shipping Centers and Commercial Office Buildings. We work in our local area of Southern California as well as providing Infrared to national contracts for over 5 years. Allis Engineering is proud to have team members with the experience to get your job done, from competitive pricing, coordinating trips to producing quality reports.
- **Qualifications**  
What makes a company qualified? A Degree in Industrial, Electrical or Engineering is a great start. Electricians or C-10 license is also very helpful. Certification programs in Infrared Thermography are also available throughout the US. Allis Engineering employs individuals with MBA's, Electric Engineering degrees, and Journeyman. We are also proud to employ ex military who are now putting their electrical experience to use to serve you. Allis Engineering also has a management and support staff to assist each client.
- **Insurance**  
Request Insurance Certificates for Liability and Workers Comp. These are easily obtained by calling the Company you have selected and typically the certificates are received within a couple days.

- **Other Services**

Allis Engineering offers Vibration Analysis while doing Infrared. This saves times and gives facilities an insight as to the condition of their expensive and critical rotating equipment (chillers, pumps, compressors, fans). We also offer GFI testing of main breakers and provide basic electrical diagnostics services.

Our staff is available to make presentations at meetings, conferences and trade shows. We would love to talk with you about how our services can benefit your maintenance program . . . just give us a call.
